

## **Kings Energy Services enriching the client experience**

### ***Providing Solutions***

**Red Deer, AB. (January 23, 2019)** – An exciting new product is engulfing the Canadian market place thanks to a strategic distribution partnership between Kings Energy Services Ltd. of Red Deer, Alberta and CATCO - Catalytic Heater Company of Terrell, Texas. CATCO a specialist company that provides high quality catalytic heaters for customers and industries looking to prevent production loss due to freezing. Born from an innate desire to provide top of the line solutions, owner and CEO Jason King sought out a specific complementary product, with his customers in mind, to enhance the already stellar offerings provided by Kings Energy. It is through a fundamental understanding of his client's needs that propelled King to source a product that will not only enhance systems and processes throughout the cold, and challenging Canadian winters, but will provide reassurance to clients that they will be able to maintain productivity even in the harshest of conditions.

**“Providing Solutions is what we do at Kings Energy, thus I am thrilled to announce a strategic partnership with CATCO – Catalytic Heater Company. CATCO has a long history of providing high quality, reliable products for preventative freezing utilizing catalytic heating technology. This partnership is very exciting for Kings Energy as we continue to focus on becoming a complete solutions provider for all our valued customers.”**  
– Jason King, CEO, Kings Energy Services Ltd.

CATCO –heaters produce heat through a catalyzation process, or chemical reaction, which creates heat by breaking down molecules. This heat producing chemical- reaction allows for the safe application of CATCO heaters in all industrial environments including hazardous settings. The flameless heaters produce radiant, infrared heat providing a safe, efficient, effective, economical and environmentally friendly option to plant maintenance in severe weather conditions, allowing equipment to perform reliably and at set parameters at all times.
